

**Jasper Engineering teams up  
with Syneco Systems**  
*"Odor Control Made Easy"*

Syneco Systems manufactures the industry leading high H<sub>2</sub>S Patented Converting media technology. The innovative Peacemaker® line is designed for point source H<sub>2</sub>S control in municipal and industrial wastewater collection systems and treatment plants, thus eliminating large and costly centralized scrubber systems.

PEACEMAKER® Dry Air Scrubbers provide two stage chemistry for the control of odors from hydrogen sulfide (H<sub>2</sub>S), mercaptans, ammonia, amines and other odors generated in wastewater collection and treatment systems. They are easy to use, effective and economic and have no maintenance.

Proven 99-100% removal rates of H<sub>2</sub>S with long media life

Odor control manhole scrubbers and vent scrubbers use the same converting media as our Peacemaker scrubbers. They are easy to install and come in many sizes.

**Use Syneco Systems in:**

- Lift Stations
- Headworks
- Grit Rooms
- Sludge Processing

Prevent corrosion from H<sub>2</sub>S, but more importantly, keep your operators and staff safe from the harmful affects of H<sub>2</sub>S in your plant and lift stations.
